DATA ENGINEER

3+ Years Experience | PySpark | AWS | Big Data | Distributed Systems

PROFESSIONAL SUMMARY

Data Engineer with 3+ years of experience building scalable data pipelines and distributed data systems using PySpark, AWS, and Snowflake. Processed 50GB+ daily data workloads and reduced pipeline costs by 25% through optimization. Strong expertise in ETL design, data modeling, and data quality in financial systems.

TECHNICAL SKILLS

Languages: Python, SQL, PySpark, Java
Data Engineering: ETL Pipelines, Data Modeling, CDC, Batch Processing, Data Warehousing
Big Data: Hadoop, Hive, Spark, Databricks, Snowflake, dbt (Data Build Tool),
Cloud: **AWS** (Glue, Lambda,Redshift, S3, Athena, Step Functions, EventBridge, Lake Formation, Cloudwatch),
Azure :(Databricks,delta tables,pipelines)
Tools: Apache Airflow, Git (GitHub, GitLab), Jenkins, Alation ,Claude code
Methodology: SDLC, Agile,Jira adoptions.

PROFESSIONAL EXPERIENCE

Data Engineer — Barclays,Chennai	July 2023 – Present
- Owned and built scalable ETL data pipelines processing 50GB+ daily data using PySpark, AWS (EMR), and S3 - Reduced data processing costs by 25% through pipeline and data workflow optimization - Designed and implemented CDC pipelines using Airflow and EventBridge following CI/CD - Migrated large-scale data systems from Teradata to Hadoop/Spark - Converted BTEQ-Sql workflows into PySpark pipelines - Developed scalable frameworks for data validation, schema evolution, and data workflow architecture - Implemented data quality checks, improving reliability Monitored and optimized pipelines using AWS CloudWatch, improving failure detection and system reliability - Collaborated with data and business teams to deliver scalable, production-grade data pipelines - Managed freshers , conducted Sessions for knowledge transfer to team showcasing my leadership skills	

KEY PROJECTS

Real-Time Data Pipeline (AWS + Spark Streaming)
- Built real-time data pipeline using AWS and Spark Streaming for high-throughput ingestion - Processed and stored large-scale structured data in S3 with optimized transformations - Designed scalable architecture for high-throughput data ingestion
Data Migration & Reconciliation Framework
- Developed automated framework for validating data consistency across systems - Compared large-scale datasets between Teradata and Hadoop environments - Reduced manual validation effort and improved migration accuracy

ACHIEVEMENTS

- Promoted to **BA4 (Associate Level)** within 2 years based on performance

EDUCATION

B.E Computer Science and Engineering — Anna University,Chennai,Tamilnadu | CGPA: 8.8/10 | May 2023
Higher Secondary (Computer Science) — Tamil Nadu State Board,Udumalpet,Tamilnadu | 1170/1200 | May 2018

CERTIFICATIONS

- Microsoft Certified SQL AI Developer associate
- Snowflake Hands-on Essentials (5 Badges)
- Databricks Fundamentals Certification
- DBT fundamentals Certification
